

Spirco Manufacturing

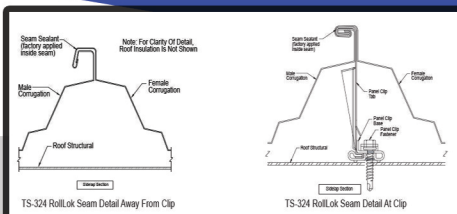

Introducing the new SL-324 Standing Seam Roof System

SL-324

RollLok

The RollLok seam is crimped at the panel clips. The weather tightness and wind uplift ratings are superior to existing snap together panels.

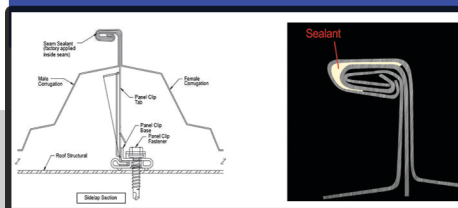

This is achieved with a manual crimping tool. No electric seamer required.

TripleLok

The TripleLok seam is accomplished with an electric seamer making a single pass. The seamer can seam in both directions (up slope then down slope).

The TripleLok seam is essentially a Double Lock seam rotated 90 degrees.

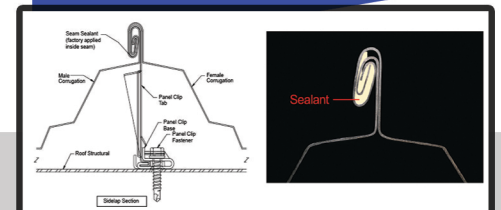

QuadLok

The QuadLok seam is accomplished with an electric seamer making two passes along the seam.

The seamer can seam up the slope, then down the slope and over the same seam.

The QL seam is a TripleLok seam rotated down 90 degrees.

Who we are?

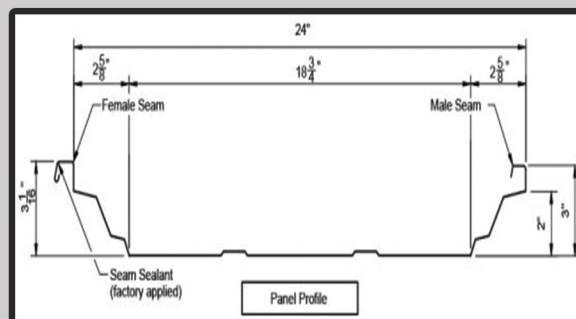

Spirco Manufacturing is a custom manufacturer of metal building systems, self-storage facilities and a complete line of metal components.

Spirco buildings are those of choice for industrial/warehouse spaces, agricultural buildings, retail establishments, offices, churches, sports complexes and much more.

Why choose us?

For over 30 years, Spirco remains committed to improve the way we do business by being a company that is committed to quality and customer service.

Through dedicated employees, high manufacturing quality standards and service we will continue to build the trust of existing customers and gain the trust of future customers for years to come.

Spirco SL-324

Standing Seam Roof System

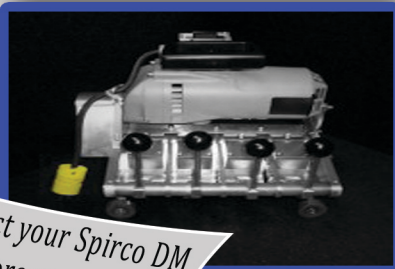

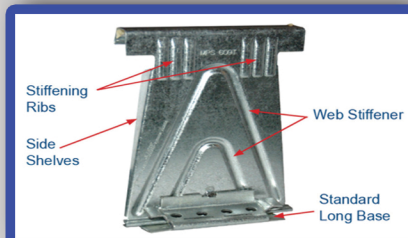

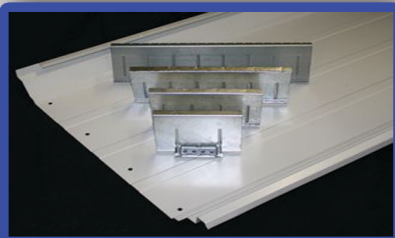

Features:

- 24" Coverage
- Factory applied seam sealant
- Concealed fasteners
- Multiple clip options for design flexibility
- Minimum ¼ : 12 slope
- 3" Trapezoidal rib profile

Benefits:

- Multiple applications
- One panel adapts to nearly any job need
- Virtually maintenance free
- Reduces potential leaks from fasteners
- Meets most severe uplift requirements
- Excellent weather resistance

SL-324 offers design flexibility accomplished by simply changing the field seaming method!
